UP STAIRLIFT

Next level
Stairlift

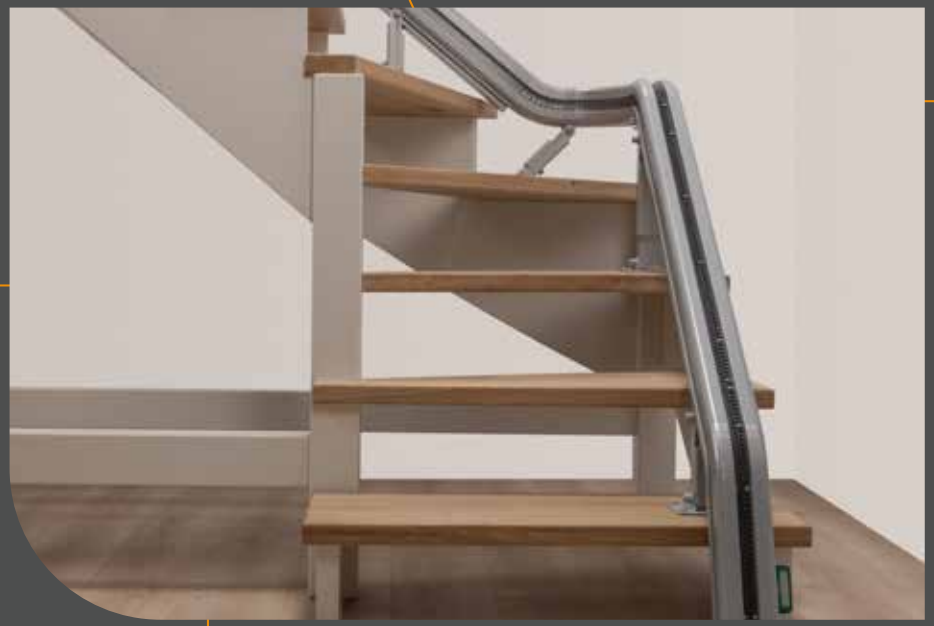

You may have never thought about it this way, but with a stairlift you want the same comfort and safety as your own favorite car. Because a stairlift brings you up and down safely, giving you the possibility of living at your own home a lot longer.

While other stairlifts require a custom-made rail, the rail system of the UP Stairlift consists of only two parts, allowing any rail shape to be created as needed. This makes even next day delivery possible. Combined with its luxurious design and WiFi connectivity, the UP Stairlift is not only a quick and safe solution, but also an elegant piece of furniture that seamlessly blends into your interior.

Discover all features that make an UP Stairlift next level.

Next level standard features

01

Automatic 2-way swivel chair

The seat automatically swivels away from the stairs at both the top and bottom, ensuring safe and easy access when getting on and off the chair. It also automatically returns to its parking position when not in use.

02

Slim design

The UP Stairlift is designed to maximize space when not in use. It requires only 180 mm from the wall, with a unique low rail position that won't obstruct stair access. Foldable armrests and seat minimize space usage, allowing for normal use or quick access in emergencies. The footrest automatically folds and unfolds when you raise or lower the armrests, bending over is therefore no longer necessary.

03

Intercom

In case of a malfunction, you can contact a pre-defined person/ company using the built-in intercom while remaining seated. Your stairlift can be checked remotely, and the issue can often be resolved on-site.

04

Seatbelt

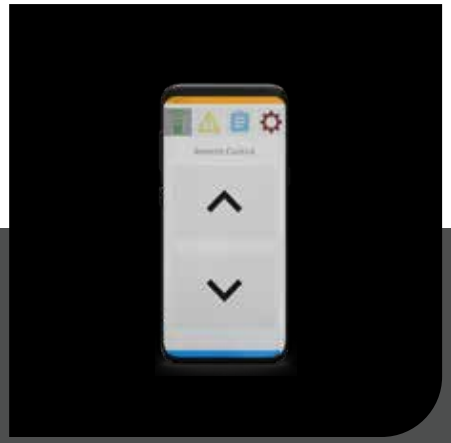

For safety reasons, the stairlift will not operate unless the seatbelt is securely fastened.

05

Comfortable luxurious chair

The UP Stairlift combines modern design with luxurious leather hand-stitched upholstery and is available in four stylish colors, seamlessly blending into any interior. Its deeper seat ensures maximum comfort, providing a relaxed and secure sitting experience.

06

Remote diagnostics

With WiFi connectivity for remote diagnostics and troubleshooting, your stairlift can be checked by your installer remotely. This allows most issues to be resolved remotely or reduces the required visit time.

07

Easy control

Remote app
Using an application on your smartphone or tablet, you can easily move the chair up and down the stairs.

Remote control
When multiple people use the stairlift, it might be upstairs while you are not. With the remote control, you can easily bring it back down or send it up again.

Joystick
The stairlift is usually operated using the joystick on the armrest—no complicated levers or buttons, just a simple turn to the right or left. The key switch option allows the stairlift to be activated only with our key tag.

UP Stairlift **Straight**

The straight stairlift is designed for straight stairs with a straight finish, and offers the option of a hinge rail or footrest level finish. Thanks to the unique modular rail, the UP Stairlift fits any straight staircase. You can choose whether the stairlift should be installed on the inside or the outside of the staircase. The rail consists of just one part and can be fully customised on site. It is always delivered with an automatic swivel chair, powered footrest and intercom. The UP Stairlift is also available with clamp supports, ensuring your steps remain undamaged.

UP Stairlift
Curved

The curved stairlift is designed for a staircase with one or more bends and is always delivered with an automatic swivel chair, powered footrest and intercom. With its unique modular rail, the UP Stairlift fits on any staircase with bends. Whether you have a narrow or wide staircase, a spiral staircase, or steep stairs, the UP Stairlift provides the perfect solution. The rail consists of only two parts that can be used to create any shape. Do you have straight stairs, but prefer a horizontal or dropnose ending, or a 90 or 180 degrees parking curve? Then the curved stairlift is the ideal choice for you.

Safety and design

The award-winning UP Stairlift complies with all European, American, and Canadian regulations, and offers the highest levels of safety and design. Equipped with advanced features such as an automatic swivel chair, powered footrest, and intercom system, it ensures both reliability and peace of mind. Designed to the highest standards and available in 4 modern colors, the UP Stairlift combines safety with elegance, making it the perfect solution for anyone seeking a safe and stylish mobility solution.

Environmentally friendly

Social responsibility is central to both the development and production of our products. The stairlift, which is manufactured in the Netherlands, has an aluminium rail which offers significant energy and CO_2 savings. Aluminium is a lightweight, durable, and sustainable material, ensuring that the rail will last for generations. In fact the aluminium used in our rail is made from recycled material and produced by an energy efficient extruder powered by 70% hydro energy. Even after years of use, the rail remains 100% recyclable.

Our sustainable approach extends to the modular rail design, which supports a circular process. The rail and chair can be completely reused, reshaped, and reinstalled in your new home or elsewhere, promoting long-term sustainability. Good for you and good for the environment.

Landing options

Straight
The basic finish with a straight rail ending. The stairlift parks at the end of the stairs and no bends are needed for this landing option.

Horizontal
The stairlift parks on a horizontal end piece, keeping the seat further from the stairs for a more spacious feel.

Dropnose
If you prefer the rail to take up as little space as possible, a dropnose end piece can be added (only 160mm / 6,3 inch from the stairs).

Automatic hinge rail
If you have a door next to your stairs, the hinge rail lets you park the stairlift without blocking the entrance. It automatically folds up after use.

Parking curve 90 degrees
With the 90-degree parking curve, the stairlift can be parked just around the corner. A convenient feature to save space.

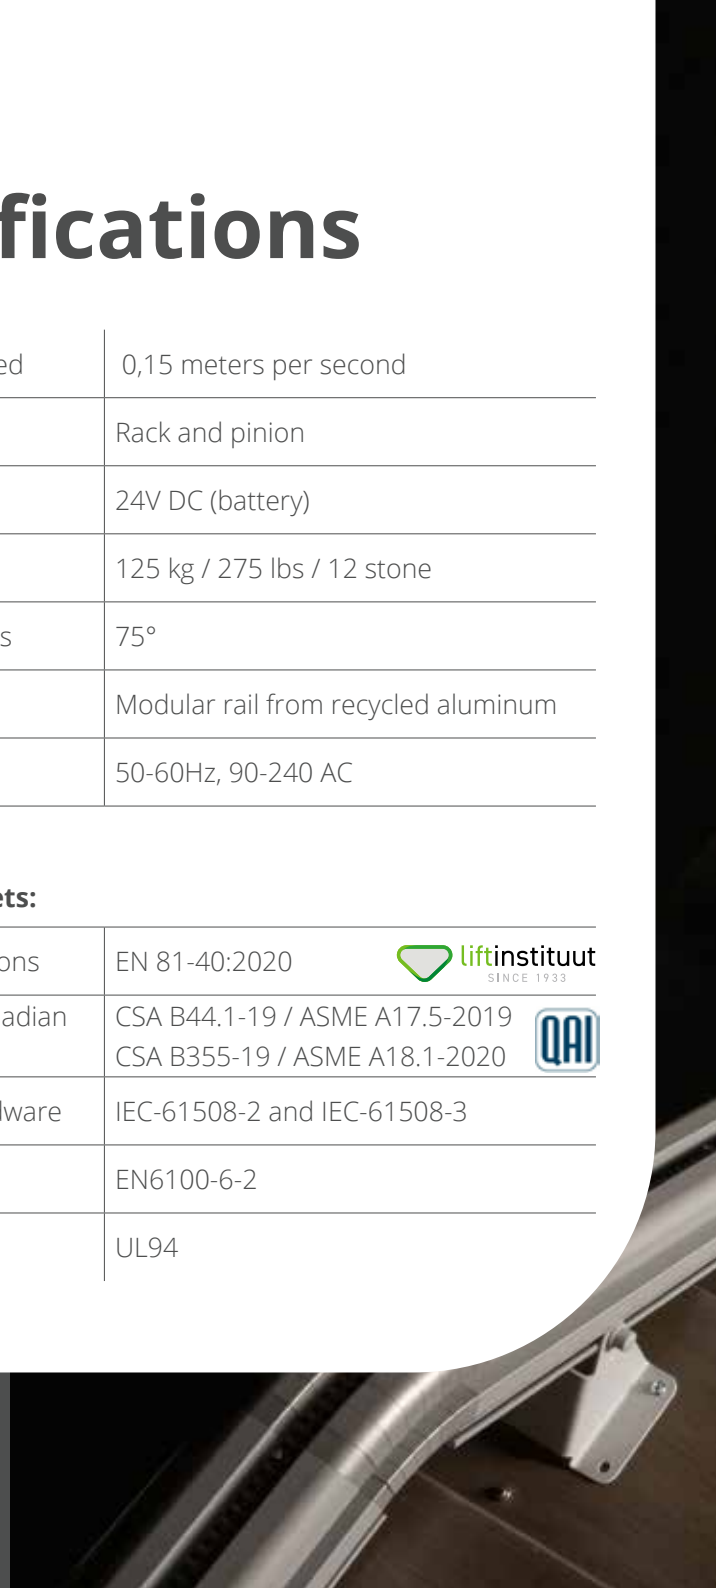

Parking curve 180 degrees
Save even more space with the 180-degree parking curve. The stairlift can be parked alongside the stairs or even behind a wall.

Specifications

Motor output speed	0,15 meters per second
Method of drive	Rack and pinion
Power input	24V DC (battery)
Max. load	125 kg / 275 lbs / 12 stone
Max. angle of stairs	75°
Rail	Modular rail from recycled aluminum
Power supply	50-60Hz, 90-240 AC

Our stairlift meets:

European regulations	EN 81-40:2020
American and Canadian regulations	CSA B44.1-19 / ASME A17.5-2019 CSA B355-19 / ASME A18.1-2020
Software and hardware	IEC-61508-2 and IEC-61508-3
EMC standard	EN6100-6-2
Fire resistance	UL94
